

Averon Is The World's Only Fully Automated Mobile Authentication Solution

Direct Autonomous Authentication™ (DAA™)

Averon is an award-winning, turnkey API solution that confirms user identity in real-time via mobile carrier data packets. Our DAA solution seamlessly integrates to decrease friction and increase security in mobile payments, blockchain transactions, credit card purchases and more. Averon requires zero installations and no end-user involvement, working invisibly in the background for an easier, faster and more secure user experience.

- 100% frictionless for improved user engagement
- Replaces unsecure legacy methods like SMS, app downloads & email codes
- Eliminates password hacks, reduces fraud & securely manages user access
- Uses mobile SIM as the source of trust

Automatic

Averon works beyond the device, at the carrier level, requiring zero effort by users.

Continuous

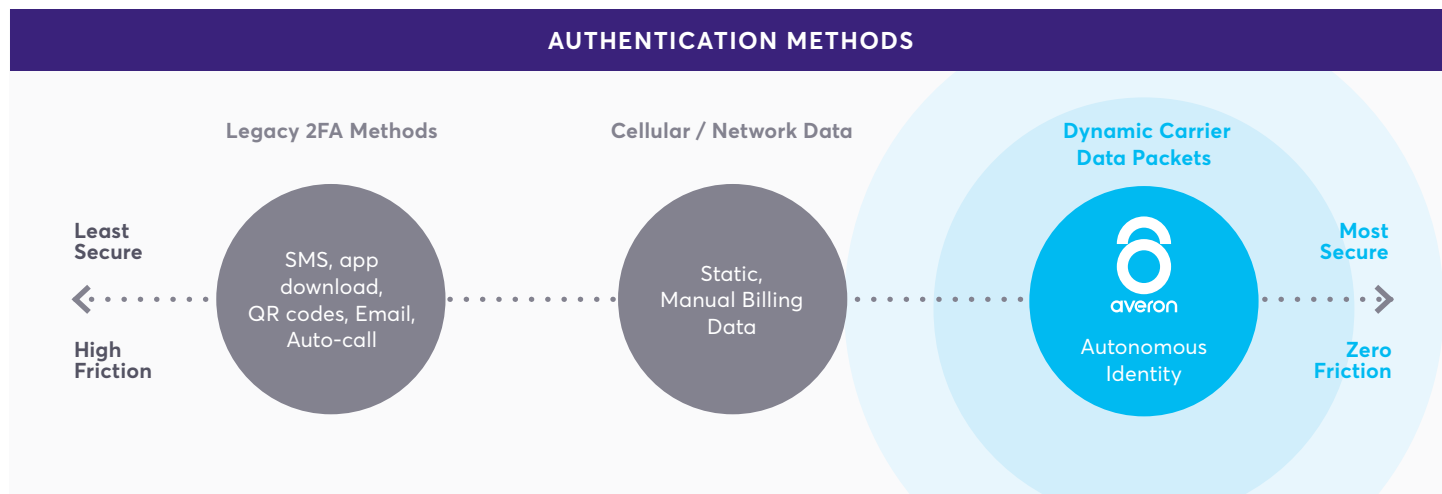

Instant and comprehensive coverage of all US devices, whether at home or abroad.

Ultra Secure

With no user info shared or app download required, our solution is the most secure and compliant solution available.

Averon's API Instantly Authenticates Devices Securely Verifies Users via SIM as "Chip Present"

Averon Instantly Authenticates Mobile, PC, or Tablet Devices for Multiple Use Cases

- Secure user logins from password hacks
- Instantly detect fraud at checkout
- Decrease friction in blockchain transactions
- Seamlessly secure mobile payments
- Manage role-based cloud access
- ... and much more

Averon Receives Real-Time Signaling from Carriers to Authenticate Users
